	Wilson	9-12	1350	1257	1301	1106	82%		

*__Assumptions:__ A school boundary should result in a sufficient neighborhood population to meet school size targets. For modeling purposes, it is assumed that 25% of students will attend other PPS schools, including charters, alternatives, focus options or the neighborhood schools where students were residents before moving to the current neighborhood. A further assumption is that 10% of school enrollment to be made up of non-neighborhood students, including students attending special education programs, approved for hardship transfer or former resident students. Some schools (highlighted in orange) house choice programs open to students from other neighborhoods.

Enrollment counts do not include PK students, including those attending Head Start programs
Enrollment counts for Grant, Madison and Lincoln high schools include Jefferson dual assignment areas

School enrollment targets for modeling purposes:
K-5 = 450 students
K-8 = 500 students
MS = 600 students
HS = 1350 students
